

Enable Midstream owns interstate and intrastate natural gas pipelines, as well as a gas gathering operation, processing and treating services. In addition, we own crude oil gathering and hazardous liquid lines. In Tennessee, we operate Enable Gas Transmission (EGT), one of our interstate natural gas transmission lines.

COMMITMENT TO SAFETY, HEALTH & THE ENVIRONMENT

Enable Midstream Partners is committed to the safe and reliable operations of its pipelines in your community. According to the National Transportation Safety Board, pipelines are the safest and most economical method of transporting products. We monitor the operation of our pipelines from our control centers, 24 hours a day, seven days a week. Our pipelines are designed, installed, tested, operated and maintained in accordance with all applicable federal and state requirements. Our safety education efforts include outreach with excavating contractors, emergency response officials, appropriate public officials, farmers and affected public.

EMERGENCY PLANS

If a gas pipeline emergency were to occur, Enable Midstream personnel will work directly with local emergency responders. Our priorities at the scene of a pipeline emergency are the same as yours-- protect people, property and the environment. Enable Midstream field personnel are trained in Incident Command Structure (ICS) and familiar with how to work with local responders within the ICS framework. Enable Midstream personnel will restrict the flow of gas and implement other operating actions as needed to minimize the impact of the emergency. Public safety officials and other non-company personnel should not attempt to operate pipeline valves.

Improper operation of pipeline valves can cause other accidents to occur. For more information about Enable Midstream pipeline safety programs, emergency response plans, or our Integrity Management Program visit our website at www.enablemidstream.com.
